## DETAILED ACTION

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claims 1 and 3 are rejected under 35 U.S.C. 102(e) as being anticipated by Masuo et al.

Masuo et al disclose a portable casing with a display fixed thereon (10a), the casing having exercise quantity measuring means installed therein (abstract) at least one set of electrodes fixed to the surface of said portable casing for measuring bioelectrical impedance (abstract); data inputting means for inputting

personal data including sex, age, height and weight (col. 4, lines 52-63); and body fat rate calculating means for determining the body fat rate on the basis of the personal data and the value of bioelectrical impedance, which bioelectrical impedance appears between two selected electrodes when a controlled weak current flows between the two selected electrodes through a living body whereby the exercise quantity along with the body fat rate are shown in said display (claim 1), the casing having exercise quantity measuring means installed therein (abstract); at least one set of electrodes fixed to the surface of said portable casing for measuring bioelectrical impedance (fig. 1).

Claim 2 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. *Drinan et al disclose a body composition analyzer with trend display.*

Alufuku et al disclose a health monitoring system.

Gallup et al disclose a body composition analyzer.
